SUMMARY

Full Stack Developer and ML practitioner building AI-powered, agentic web applications and end-to-end ML solutions. Experienced across the **SDLC** in **backend development**, **API development**, **Python scripting**, **OOP**, **debugging**, **unit testing**, **data processing**, **automation**, and **cloud computing**. Proficient in Python, React, Node.js, FastAPI, scikit-learn, LangGraph, and the Gemini API, with a strong foundation in DSA, DBMS, Computer Networks, and OS.

EXPERIENCE

Web Developer Intern – Qublet Technology LLP

Rajkot, Gujarat

Node.js · MySQL · REST APIs · RBAC · Backend Development

May 2026 – Jul 2026

- Contributed to the **SDLC** of a Loan Management System using **backend development** with Node.js and MySQL, gathering and documenting business requirements across Super Admin, Admin, Employee, and Channel Partner roles.
- Designed the relational database schema and ER diagrams for users, banks, loan types, customer cases, employees, and channel partners, applying **Object-Oriented Programming (OOP)** principles while planning role-based access control (RBAC) and authentication workflows.
- Built financial and case-management modules via **API development**, covering loan sanction amount, tenure, ROI, and payout tracking, plus insurance **data processing** and validation, and payment/invoice **automation** workflows to streamline manual case entry.
- Developed reporting and dashboard specifications (case status, payouts, bank and loan-type analytics) with filtering/search, and performed functional, **unit testing**, validation, security, and integration testing along with **debugging** across modules.
- Delivered complete technical documentation and supported deployment-readiness review, taking the project from requirement gathering through UAT preparation over a 9-week engagement.

PROJECTS

HealthTrack AI | AI-Powered Health Risk Prediction & Agentic Monitoring Platform

- Designed an autonomous LangGraph agentic pipeline for **automation** of 2-hour, 6-hour, and daily AI health summaries via the Gemini API using structured JSON output and **data processing** pipelines; trained Random Forest and Gradient Boosting models for Diabetes (97.2% accuracy, 0.975 AUC) and Heart Disease (99.3% accuracy) on ~170,000 patient records.
- Architected a RESTful Node.js/Express backend (14 route modules, 16 Mongoose models) with **API development**, **backend development**, JWT auth, and role-based access across Patient, Doctor, and Hospital dashboards, applying **OOP** design and **unit testing** for reliability.

FlowMind | Agentic Workflow Automation Platform

React, FastAPI, Node.js, MongoDB, Gemini 1.5, AWS EC2

- Converted natural language prompts into executable DAG-based workflows using the Gemini 1.5 Flash model with structured output parsing, **Python scripting**, and self-healing recovery for robust **automation**.
- Integrated GitHub, Gmail, and Notion via MCP orchestration and **API development** with an ML-based execution risk model; deployed and hosted the application on an **AWS EC2** instance, including **debugging** and validation of workflow logic.

TECHNICAL SKILLS

Languages: C, C++, Python (Python Scripting), SQL

Web & Frameworks: React.js, Vite, Node.js, Express.js, FastAPI, JavaScript (ES6+), HTML5, CSS3, JWT, RESTful APIs, WebSockets, API Development

AI/ML: LangGraph, LangChain, scikit-learn, Random Forest, Pandas, NumPy, Matplotlib, Seaborn, Feature Engineering, Data Processing

Databases & Tools: MySQL, MongoDB, Git, GitHub, Postman, VS Code, Jupyter Notebook, Google Colab

Cloud: AWS (EC2), Cloud Computing

Software Engineering: Software Development, SDLC, Object-Oriented Programming (OOP), Backend Development, RESTful API Design, Modular Architecture, Version Control, Data Structures and Algorithms, Algorithmic Design, API Key Management, Unit Testing, Debugging, Automation

EDUCATION

Pandit Deendayal Energy University

2023 – 2027

B.Tech in Information and Communication Technology

CGPA: 8.58 / 10 (through 6th Semester)

ACHIEVEMENTS & COMPETITIONS

Selected Participant – Amazon ML Summer School, learning advanced ML concepts and practices

GATE 2026 – AIR 8659 (Score: 41.44) – Demonstrated strong CS fundamentals

HackOut'25 & Tata IDEATHON – Consistent participation in national-level hackathons

CERTIFICATIONS

JPMorgan Chase – Software Engineering Virtual Experience (Forage)

2nd Runner-Up – Cloud Knight Workshop Hackathon, organized by Encode & ACM-PDEU

C Programming Certification

Teliport Season 3 – Certificate of Participation, organized by Tata Elxsi

Top 15 Teams – DA-IICT College Hackathon (HackOut'25)

MATLAB Machine Learning & Signal Processing Onramp – MathWorks
